

MultiPhysX Consulting – MPX

Newsletter n°4

April 2026

After 6 months, a little moment to step back and reflect on my new adventure as an engineering consulting entrepreneur, and an opportunity to share some news with those who have been asking. 🔍

🔲 **My start** : After 25 years at DuPont and Celanese, I chose to turn the page and launch a simulation engineering company. A bold bet, but a deep conviction.

🕒 **My approach** : As a newcomer to entrepreneurship, my first question was simple: what do I want to achieve, and how do I get there? You can't do everything alone. So I focused on the right tools, the right suppliers and the right partners — all while managing my budget carefully.

📁 **My resources** : My CPF (professional training account) allowed me to train in business creation and WordPress. France Travail, the CMA and the CCI de Versailles guided me in building a solid business plan. Asking questions and seeking advice really does make life easier.

⚙️ **My admin** : For the dual registration, administrative procedures, accounting and compliance (including electronic invoicing), I trusted Dougs. Result: simple, clear, fast and efficient. I was able to focus on what matters most. The Versailles tax office, URSSAF and other organisations also provided valuable advice.

🛡️ **My protection** : Surrounding yourself with professionals means you don't overlook the essentials: business insurance, equipment insurance, a dedicated professional bank account. The goal? Keeping your personal and professional life separate from day one.

🤖 **AI as an ally** : Step by step, the pieces fall into place. Today, I've integrated AI into my daily routine: Mistral, Copilot and Claude have helped me with my project — naming my company, building my website www.multiphysx.com, learning WordPress (tips and overcoming challenges) and moving forward. It's not perfect, but everything has to start somewhere.

🎓 **Continuous learning** : The entrepreneurial journey also means questioning yourself and never stopping learning. Right now, I'm relying on two programmes to accelerate and support my activity:

- Ansys Hub Learning : I actively use it to build my simulation skills and stay at the cutting edge of my field.
- Boost Agent AI Programme – CCI de Versailles : A programme I'm currently following to concretely integrate AI into my work and gain efficiency in my day-to-day.

These two programmes are real growth drivers for me. Learning never stops — and that's a good thing. 📈

🧡 **My suppliers and partners :** Thank you to my suppliers for their invaluable guidance on software and equipment : 4CAD Group, Ansys, Aplicit, Autodesk, Fra-SYS, Dougs, macreationentreprise.fr, CCI Versailles Yvelines,...

And thank you to all the people and companies who have believed and continue to believe in my project, those who advised me, gave me motivation — and I'm sure they'll recognise themselves.

This is only the beginning — it's built step by step, with time and determination. 💪
